

Dollhouse Scales Guide by MarysMiniatures.net

Understanding dollhouse scales is a must for any budding hobbyist. Below we have information on the most common scales that you will find in our store. Note that the majority of our store items are 1:12 scale unless otherwise noted.

Playscale (1:6) - 1/6

Playscale is not something you are going to see a great deal of, it's rather scarce by comparison to the other scales. So, a real life 12-foot item would be only 24 Inches tall in 1:6 scale

1 Inch (1:12) - 1/12 - This is the most popular scale by far and what the majority of our inventory is comprised of. 1:12 scale is an easy conversion, if it's 12 ft in real life, the scale version is only 12 Inches tall.

½ Inch (1:24) - 1/24 - Half Inch scale is also fairly popular, you will find many of the half in scale items in our store, they will be clearly marked as such. 1:24 scale conversion is also pretty simple, a real-life object which is 12 feet tall would be 6 Inches tall in a half in miniature.

¼ Inch (1:48) - 1/48 - Quarter Inch scale miniatures are not as popular but have quite a dedicated following. A 1:48, most commonly referred to as a 1/4 Inch miniature is easy to convert as well. A real-life object which is 12 feet tall would be only 3 inches tall as a 1/4-inch miniature.

Dollhouse (1:144) - 1/144 - This is most commonly used for scaling items for within your dollhouse. For example, [a dollhouse to go in your dollhouse](#) must be 1:12 scale in reference to your dollhouse... therefore the correct scale for the item is 1:144. The real 12 feet tall to 1/144 scale is only 0.83".... very tiny =)

Here is a 12-foot quick chart for you:

Scale	Real Life Size	Miniature Size
1:6	12ft	24in
1:12	12ft	12in
1:24	12ft	6in
1:48	12ft	3in
1:144	12ft	1in
